# For Loop

- We know how to use a for loop:
  - `for(var i:int = 0; i < 10; i++)`
- Applying that knowledge to an Array
- We need the property called length
- Dot Syntax
  - `arrayName.length`

# for loop

```
for(var i= 0; i < myArray.length; i++)  
{  
    var item= myArray[ i ];  
}
```

- Initialize Variable
- Condition
- Operation after Each Iteration
