Definition

- Lists of data which are capable of storing more than one item at the same time.

- Easier to gather items of the same type in a single container.

- Retrieving groups of items and changing them are much easier.

Usage

- Literal - Can Assign Array Directly To Array Variable

  - var arr = [ ];

  - var arr = [item1, item2, item3, etc...];

Access

- An Array stores a group of items in order. Each item is accessed by using its index

- Array indices are integers ranging from 0 to one less than the length of the Array.

- To access a specific item:

  - var item = myArray[0];

Set A Value

To set a specific item:

- myArray[1] = 'Value';
